Engineered Access Solutions for Medical Equipment

Supporting the Medical Industry

Innovative access control and positioning hardware from Southco enables medical device companies to design safe, secure and intuitive products for critical environments.

Are you selecting the right hardware to enhance your medical device?

For over 70 years Southco has helped Medical Device Manufacturers to overcome engineering challenges, enabling the medical industry to offer an enhanced end user experience and increased security to help meet regulatory requirements and patient needs.

Enhance User Experience with Southco touch points

Your medical equipment's touch point mechanisms have the power to make a big impact in your end users' experience. We design our access hardware with this in mind, delivering innovative touch point solutions that provide safety, security and ergonomic operation.

Electronic Safety & Security

Electronic access and hidden solutions allow for heightened security and remote monitoring of access to storage areas containing medications or sensitive documents.

Ergonomics

Achieve intuitive, ergonomic positioning of the display or touchscreen on your medical equipment with Southco's position technology Monitor Mounts and Arms.

Hygiene

Reduce bacteria count and keep high touch surfaces clean with our Microban integrated and IP69K certified solutions.

Intelligent Access Control & Regulatory Compliance

Electronic Security & Safety

Replacing mechanical locks and latches with electronic alternatives, significantly enhances the access control to critical equipment. Electronic Access Solutions remove the need for physical keys and facilitate a seamless transition to smart healthcare, including:

- eliminating cost associated with physical key management
- equipment access via RFID cards and smart devices
- data capture for reporting and audit trail
- seamless integration with existing systems and software
- enhanced access control of critical storage equipment

with your smart device

Controlled Positioning of Equipment

Ergonomics

Enhance functionality, precision and user experience with Southco's positioning technology solutions.

Laboratory Analyser

Counterbalance mechanisms enable easy positioning and securing of heavy lids with zero effort

CB-11 Counterbalance Hinge

Medical Cart

Monitor mounts provide an ergonomically enhanced user experience

AV-D40
Arms & Mounts

Laboratory Equipment

Position technology hinges prevent drift and repeated manual adjustment.

ST, E6 & G6 Hinges

Safeguarding Hygiene & Safety

Hygiene

Selecting the proper engineered hardware enables a safe and intuitive means for operating equipment used in critical environments

- latches can be designed to support your IP69K application
- captive hardware reduces the risk of falling or lost parts
- built in Microban antimicrobial technologies prevent bacteria growth
- latches with visual indication provide a quick assessment of equipment access

Enhanced Performance of Critical Devices

Performance

Medical device reliability is crucial to patient care, user safety and operational performance. Southco has worked alongside some of the world's biggest medical and laboratory equipment manufacturing brands.

Laboratory Centrifuge

Prevent accidental opening of critical equipment and secure stability of devices during vital procedures.

R4-EM-05 Mini Electronic Rotary Latch
R4-05 Rotary Latch (right)

Dialysis Machine

Provide sealing and compression on equipment of all sizes, withstand vibration and eliminate noise.

R5 Heavy Duty Draw Latch

About Onurfix

Onurfix was established in 1984 in Istanbul. The firm which was primarily engaged in the importation of hardware and technical materials in the foundation years, has subsequently decided to specialize in assembly systems and assembly equipments by anticipating that the production systems will be diversified following the industrial development in Turkey.

Onurfix, which introduced the industrial sector in Turkey for the first time with more technological and innovative products other than the usual assembly products such as screw and bolts after importing rivet nuts in 1987, has become an essential supplier of the producing companies by never compromising the quality of customer satisfaction and internalizing and sharing technical knowledge.

Onurfix, which exhibits a sensitive position on such issues as

Quality product

Technical data

Product variety

Stock power

On-time delivery

which are needed in the design and production process of the products, regards itself as a part of the production process and a solution partner, not a seller. With its technological and innovative product group, Onurfix which enables the producers to produce faster and less costly production has adopted the principle of adding value to the institutions it works with.
