R4 EM Light Duty Electronic Rotary Latch

Electronic access

Operation

Auto Re-lock Version

1. The signal momentarily unlocks and releases the spring loaded cam which rotates out to push a lightweight door open. The latch then immediately returns to the locked state ready to re-lock upon closing
2. Push door closed to engage striker with the R4-EM latch

Delayed Re-Lock R4EM

Use the Delayed re-lock version for heavier doors that will not kick open or where remote lock/unlock manual door opening is preferred over a pop open style.

1. The signal unlocks the R4-EM latch leaving a biased closed door in the closed position.
2. Manually pull door/striker free from R4-EM latch
3. Manually push door closed. Striker will rotate cam to closed position, however latch will remain unlocked and can be re-opened as long as signal is present
4. After accessing the door, the signal can be removed to re-lock the R4-EM. This can be done with the door in the open or closed position.
