ENTRY

Your Global Full Service Supplier for
Off-Highway **ENTRY DOOR SOLUTIONS**

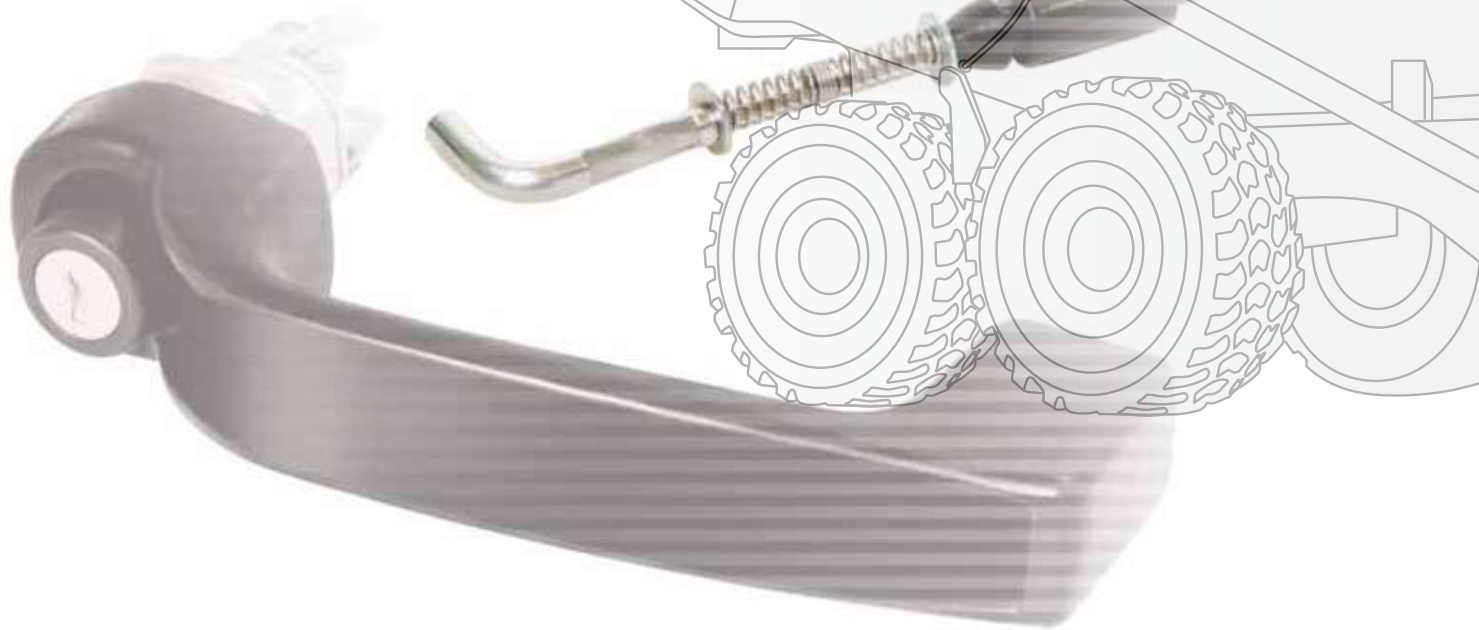

Off-highway entry door solutions

Southco's off-highway access hardware solutions are tried and tested, robust and durable. They provide greater security and lower overall cost of ownership than available from other manufacturers for OEMs and end-users. We recognise that it's difficult for customers to choose the right latch, the right actuator and the right cables so, as a system integration specialist, rather than just offering a latch we can offer a complete system.

Entry door options create market differentiation

- Rugged, secure rotary latches satisfy off-highway standards
- Electronic access options offer more convenient security
- Convenient "one-key" and "Key-Choice" solutions

Security and convenience

Why should you compromise the security of your vehicle to achieve a convenient means of entry? Southco's Electronic Access Solutions and 'Key-Choice' System provide versatile access solutions while maintaining a high level of vehicle security.

A total service - from concept to solution

R4-50 Rotary action latch

The R4-50 provides the perfect latching solution for off-highway entry door applications. This robust rotary latch's compatibility with a wide array of exterior and interior door actuators, coupled with both threaded and through-hole mounting options, make it a versatile solution for all your entry door requirements.

Benefits

- Designed to comply with FMVSS-206 standard
- Two-stage rotary operation provides firm and secure latching in the secondary latch position
- Hardened steel cam provides reliable, robust performance
- Concealed latch points for aesthetics and security

AC Actuators

Southco's AC actuators for internal and external door release provide ergonomic, reliable and secure access into and out of the cab. Available in a range of styles to fit your application requirements; including flush mount or surface mount, single or multi-point cable options, locking and non-locking and sealed actuators. Certain actuators are also compatible with Southco's electronic access solutions, so providing the ultimate in security and convenience.

Benefits

- Multiple actuator styles satisfy a range of aesthetic and ergonomic requirements
- Ample hand grips and easy actuation enhance user operation
- Different mounting styles satisfy door thicknesses up to 25mm (1" thick)
- Quick and easy attachment of custom-length cables minimizes installed costs
- Non-corrosive construction
- Electro-mechanical latching provides multi-point simultaneous keyless entry, better access management and remote monitoring capabilities
